Echo: Verification by Reverse Synthesis
A general mechanism for verifying large software systems

Echo splits verification into two parts. The first verifies an implementation against a low-level specification written using source-code annotations. The second extracts a high-level specification from the implementation with the low-level specification, and proves that it implies the original specification from which the system was built. Semantics-preserving refactorings are applied to the implementation in both parts to reduce the complexity of the verification. Much of the approach is automated. It reduces the verification burden by distributing it over separate tools and techniques, and it addresses both functional correctness and high-level properties at separate levels.

Approach and Impact

<table>
<thead>
<tr>
<th>New Approach</th>
<th>Research Impact</th>

<tr>
<td>• Verify code against annotations</td>
<td>• Does not interfere with development</td>
</tr>
<tr>
<td>• Verify extracted specification implies original</td>
<td>• Easier proofs of security properties</td>
</tr>
</tbody>
</table>

Preliminary evaluation by formal verification of a publicly available optimized implementation of the Advanced Encryption Standard (AES):

Artifacts:
- NIST official specification translated to PVS.
- ANSI C implementation translated to SPARK Ada

Refactoring:
- (1) Reverse loop unrolling
- (2) Reverse data word packing
- (3) Reverse table loop-up function implementation
- (4) Reverse function inlining

Implementation Proof:
- Completed by SPARK Ada tools.
- 136 of 144 verification conditions discharged automatically

Implication Proof:
- Completed by PVS theorem prover
- More than half the proof obligations discharged by (grind)

Alternatives:
- Verify original implementation
- Retain just loop rerolling

Equipment:
- 1.0GHz UltraSparc IIIi
- 2GB RAM

Original Program:
- SPARK toolset ran out of heap space
- Failed to complete the proof

Just Loop Rerolling:
- 15 Mbytes of verification conditions
- Two hours of CPU time
